

Andrei Murashev

Senior Frontend Developer

andreymurashev@gmail.com | www.linkedin.com/in/amurashev | Tbilisi, Georgia

SUMMARY

I am a developer with 10+ years of experience (8+ of business application experience and customer-facing products)

I like frontend because I like to see the result of my work and I am addicted to creating interesting interfaces

I always try to resolve a task with the fastest and most convenient method, be oriented on business logic, try to predict these changes on the code base, and be focused on delivering value

I strive to maintain warm and friendly communication with all team members, I am ready to help anyone (or find someone who can help) and do not shy to ask questions

I have the ability to work without design and independently come up with simple but user-friendly interfaces

I'm not afraid to take any responsibilities, but I am completely aware and understand how many responsibilities

I can conduct that doesn't slow down my work performance

PROFESSIONAL EXPERIENCE

StarOfService (starofservice.com)

Apr 2017 – Jul 2024

Senior Frontend Developer

Remote

StarOfService is a marketplace service with:

- up to 100M visits/year
- 130+ country domains (31 locales).
- big amount of functionality (13+ pages on professional cabinet, 5+ pages on client cabinet, a big bunch of SEO landing pages)

Responsibilities

- Development of FE part of application: implementation of features by Product manager's specifications
- Conducting releases of the FE part of the application
- Mentorship and onboarding: Active participation in code reviewing of other developers, mentoring new participants of the FE team
- Tech leadership: participation in the planning of FE application architecture, Participation in the development of components for micro-services architecture, Migration from legacy applications to new ones
- Interaction with different teams (Design team, QA team, product team, l18n team)
- Participation in sprint planning, technical design, and demo meetings

Achievements

- Removed all legacy code (PHP templates, Angular) and application parts.
- New frontend application built from scratch based on Next.js
- Successfully implemented dozens of pages: Ones of the most interesting parts are the real time messenger and SERP page
- Dozens of sprints are finished within deadlines (and happy product managers)

Technical stack

TypeScript, React, Next.js, Tailwind, GraphQL, react-query, RadixUi, ESLint, Jest
